

The scientific and technological objectives of ROBOFOOT are addressed through **7 work packages** to be developed during **30 months**.

In the Figure below the inter-relations among the WPs is shown. The work packages are broken down in defined tasks with their own task leaders according to their specific role within the project. **Five of them correspond to RTD activities (WP1 to WP5), one to Demonstration (WP6) while management and dissemination activities are grouped in WP7**.

The RTD phase is divided into two main sub-phases: **WP1: User Requirements and Scenario definition** and **WP2: Manufacturing Process re-engineering**. **WP1** leads to **WP3: Manipulation and grasping** and **WP4: Sensor based Robot control and programing**. **WP2** leads to **WP3** and **WP4**. **WP3** and **WP4** are interconnected and labeled as **TECHNOLOGY**. **WP1** leads to **WP5: Scenario development and validtion**. **WP5** leads to **WP6: Robot assisted footwear produ demonstrator**.
